

08/05/2009 - ED to Hosp-Admission (Discharged) in 5B2 (continued)**Clinical Notes (group 1 of 2) (continued)**

Mode of Transportation: private automobile

Patient transportation arrangements from hospital at discharge made by patient

Patient and/or family unable to sign discharge instructions due to N/A - patient agrees to destination

Emergency mental health assistance is available 24 hours a day, 7 days a week. If you need emergency mental health assistance and are a Kaiser Permanente health plan member, please call either 911 or the Behavioral Health Helpline 1-800-900-3277. If you are not a Kaiser Permanente member call the National Suicide Prevention Lifeline 1-800-784-2433.

The above instructions have been explained and I understand them. In addition I understand and agree to the planned discharge destination and mode of transportation identified above.

DM medication:

Regular insulin custom coverage

Metformin 500 mg BID

Glipizide 5 mg BID

DM goals:

Blood glucose targets:

Morning sugars 80-120mg.%

Before other meals: below 150mg.%

Before bedtime: below 150mg.%

2 hours after start of meals: 120-160mg.%

Last Retinal Screen

Scheduled on 8/28.

Pt education:

Reviewed DMSE including pathophysiology of DM, complications, DM goals and exercise.

Reviewed insulin action, withdrawing and administration per current ss and poss NPH. Pt did well.

Reviewed recognition of hypoglycemia and prevention. HO provided

Reviewed foot care. HO provided.

Plan:

Pt needs basal insulin (NPH) to optimize glycemic control. If pt dc home on Regular ss and oral hypoglycemic agents only, please prescribe NPH to add as an oupt. Will contact pt on Monday to review BG and adjust insulin.

Pt needs One Touch 2 kit, lancets, strips, and meds.

Retinal Photo scheduled on 8/28 at 8:30 AM.

Filed: 8/6/2009 6:03 PM	Date of Service: 8/6/2009 6:03 PM	Creation Time: 8/6/2009 6:03 PM
Status: Signed	Editor: Morita, Alyssa Tashiro (R.N.) (REGISTERED NURSE)	

Problem: Diabetes, Type 2 (Adult, OB, Pediatric)

Goal: Prevent/manage diabetic ketoacidosis (hyperosmolar hyperglycemic state)

Outcome: Ongoing

Patient states feels less fatigued/weak; started on glipizide+metformin; medication handouts provided and instructed patient to notify RN with any questions/concerns, patient verbalized understanding. Blood sugars monitored ac/hs, latest result=276; covered per ISS. Tolerating 1800 cal, ADA diet; educated patient on importance of adhering to diabetic diet w/ supplemental handouts given to pt. Will monitor.

CREATININE	1.3	0.7 - 1.3 mg/dL	—	305
GLOMERULAR FILTRATION RATE	58-NB	mL/min	—	305

Comment:

Comments: Estimated GFR is derived and reported per 1.73 m2 body surface area. Race used from Foundations System: "NB" non-black, "B" black. GFR estimate has been multiplied by 1.21 if "B" is indicated in the system. * GFR Ranges * GFR >89 Normal (or CKD1*) 60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD 1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on two occasions, or renal biopsy or imaging abnormality).

Collected by: SMO 08/06/09 0610

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.8	0.7 - 1.3 mg/dL	—	305
GLOMERULAR FILTRATION RATE	>89-B	mL/min	—	305

Comment:

Comments: Estimated GFR is derived and reported per 1.73 m2 body surface area. Race used from Foundations System: "NB" non-black, "B" black. GFR estimate has been multiplied by 1.21 if "B" is indicated in the system. * GFR Ranges * GFR >89 Normal (or CKD1*) 60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD 1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on two occasions, or renal biopsy or imaging abnormality).

 Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
LDL	92	<100 mg/dL	—	956

Comment:

DIRECT LDL: For patients having elevated triglyceride levels, i.e. >400 mg/dL, the direct LDL-C result may not represent the patient's LDL-C status upon restoration of triglycerides to lower levels. These patients should not be assumed to have representative LDL-C levels until triglyceride levels are reduced.

Goal: Prevent/manage diabetic ketoacidosis (hyperosmolar hyperglycemic state)

Outcome: Ongoing

Patient states feels less fatigued/weak; started on glipizide+metformin; medication handouts provided and instructed patient to notify RN with any questions/concerns, patient verbalized understanding. Blood sugars monitored ac/hs, latest result=276; covered per ISS. Tolerating 1800 cal, ADA diet; educated patient on importance of adhering to diabetic diet w/ supplemental handouts given to pt. Will monitor.

Goal: Prevent/Manage hyperglycemia

Dates: Start: 08/06/09
Description: Refer to Clinical Practice Guideline
Disciplines: Pt Care Team

Outcomes

Date/Time	User	Outcome
08/06/09 2315	Manding, Percy Domingo (R.N.)	Ongoing
08/06/09 0628	Adesina, Lucy N (R.N.)	Ongoing

Goal Note filed on 08/06/09 2315 by Manding, Percy Domingo (R.N.)

Goal: Prevent/manage hyperglycemia

Outcome: Ongoing

2200:Pt in no apparent distress. Alert,oriented x3 denies pain at this time. Blood sugar 383, covered per RISS. Demonstrates no signs of Hyperglycemia..VSS,NSR on the monitor. Call light within reach. Explained plan of care of continuing monitoring blood glucose level. Pleasant to staff.

Goal Note filed on 08/06/09 0628 by Adesina, Lucy N (R.N.)

Goal: Prevent/manage hyperglycemia

Outcome: Ongoing

0545-- BLOOD SUGAR 286, MOD NOTIFY IF OKAY TO CONTINUE CURRENT TREATMENT, INSULIN DRIP AND IV D5NS+20KCL D/C'D AND REGULAR INSULIN 5 UNITS IV X1 WITH SLIDING SCALE ORDERED. ORDERS CARRIED OUT. SNACKS GIVEN. URINE CX AND UA COLLECTED. PT RESTING WITHOUT ANY DISTRESS.

Goal: Prevent/Manage hypoglycemia

08/05/2009 - ED to Hosp-Admission (Discharged) in 5B2 (continued)**Care Plan (continued)**

Dates: Start: 08/06/09
Description: Refer to Clinical Practice Guideline
Disciplines: Pt Care Team

Goal: Prevent/Manage skin breakdown

Dates: Start: 08/06/09
Description: Refer to Clinical Practice Guideline
Disciplines: Pt Care Team

Intervention: Hyperglycemia Management

Frequency: Per CPG
Dates: Start: 08/06/09

Intervention: Skin/Mucous Membrane Protection

Frequency: Per CPG
Dates: Start: 08/06/09

Problem: KP Standard Goals

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Goal: 1-Patient is safe: 1)positively identified; 2)free from fall or injury; 3)skin intact without signs/symptoms of breakdown; 4)protected from infection

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Goal: 2-Patient is comfortable: 1)pain is controlled; 2)participates in activities and expresses comfort

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Goal: 3-Patient knows what to expect from the hospital stay and is taught according to the patient plan in Patient Education Activity

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Goal: 4-Patient has an individualized treatment plan and participates with caregivers in the development of the treatment plan

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Problem: Nutrition, Imbalanced: Excessive Oral Intake (Adult)

Dates: Start: 08/06/09
Disciplines: Pt Care Team

Goal: Patient-specific goals

Dates: Start: 08/06/09
Description: Pt. Consumes >90% of each meal of therapeutic diet which meets est. Kcal needs.
Disciplines: Pt Care Team

	HERE

Please read and sign the following agreement so that we may proceed with the care and treatment ordered by your physician.

- CONSENT TO MEDICAL CARE:** The undersigned hereby consents to the procedures that may be performed during this hospitalization or on an outpatient basis, including emergency services, which may include but are not limited to laboratory procedures, x-ray examinations, nursing care, medical or surgical treatment or procedures, anesthesia, or other hospital services rendered under the general and special instructions of the physicians.
- EDUCATIONAL CONSENT:** The hospital is an educational facility participating in the training of physicians, medical students, student nurses and other health care personnel, and they may participate in the patient's care to the extent deemed appropriate by the Medical Staff or hospital personnel.
- PERSONAL VALUABLES:** It is understood and agreed that the hospital maintains a safe for the safekeeping of money and valuables and the hospital shall not be liable for the loss or damage to any money, jewelry, glasses, dentures, documents, furs or other articles of unusual value and small size unless placed in the safe, and shall not be liable for loss or damage to any other personal property including clothing and electronic devices. The hospital's liability for loss of any personal property deposited with the hospital for safekeeping is limited by statute to five hundred dollars (\$500.00) unless the patient obtains a written receipt for a greater amount from the hospital.
- FINANCIAL AGREEMENT:** The undersigned, whether signing as a patient, parent, or representative of the patient, agrees to pay all charges for medical and hospital services not otherwise covered by health care benefits, in accordance with the rates and terms of the hospital and the patient's treating health care practitioners. If the account is referred to an attorney or collection agency, the undersigned agrees to pay actual collection costs, including attorney's fees, together with interest at the legal rate.
- ASSIGNMENT OF BENEFITS:** The undersigned, whether signing as a patient or representative of the patient, authorizes direct payment to the hospital of any health care coverage benefits otherwise payable to or on behalf of the patient for this hospitalization or for these outpatient services, including emergency services if rendered. Health care coverage benefits include Medicare, Medi-Cal, or other governmental health care program benefits. The undersigned authorizes release of medical information necessary to determine eligibility and benefits payable and to submit and process claims for payment.
- AUTHORIZED REPRESENTATIVE:** The undersigned hereby authorizes the hospital, at its election but without obligation, to represent the patient regarding any application and appeal for eligibility and benefits related to Medicare, Medi-Cal, or other governmental program benefits relating to services rendered at the hospital.
- DISCHARGE AGREEMENT:** Hospital Discharge Hour is 11:00 a.m. In order to permit the hospital to properly prepare the bed and room for another patient, the undersigned agrees that the patient will vacate the room by the Discharge Hour. If the patient holds the room beyond the Discharge Hour, the undersigned agrees to pay the hospital room rate charges.
- FACILITY DIRECTORY:** Hospital staff may disclose the patient's name, room location/telephone number and general condition to visitors who ask for the patient by name. In addition, we may provide the patient's religious affiliation, if any, to clergy. The patient may object to the disclosure of some or all of this information. In that event, we will not disclose it to visitors or other members of the public. **Any information you wish withheld will be withheld from all visitors, including florists, family and anyone inquiring about you. Please indicate any information you wish to be withheld from inquiring visitors:**

- Name
- Telephone Number or Room Location in Hospital
- General Condition
- Religious Affiliation

9. **ADVANCE DIRECTIVE:** Is patient/representative able to respond? Yes, No

Does the patient have an advance directive? Yes, No If yes, location? _____

If no, Advance Directive Informational Brochure provided by _____

10. **ACKNOWLEDGMENT OF RECEIPT (for Medicare patients only):** My signature below acknowledges my receipt of "An Important Message from Medicare" from Kaiser Foundation Hospitals.

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-2692AN IMPORTANT MESSAGE FROM MEDICARE
ABOUT YOUR RIGHTS

AS A HOSPITAL INPATIENT, YOU HAVE THE RIGHT TO:

- Receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- Be involved in any decisions about your hospital stay, and know who will pay for it.
- Report any concerns you have about the quality of care you receive to the Quality Improvement Organization (QIO) listed here Lumetra 1-800-841-1602 or 1-800-881-5980 (TDD).

YOUR MEDICARE DISCHARGE RIGHTS

Planning For Your Discharge: During your hospital stay, the hospital staff will be working with you to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.

If you think you are being discharged too soon:

- You can talk to the hospital staff, your doctor and your managed care plan (if you belong to one) about your concerns.
- You also have the right to an appeal, that is, a review of your case by a Quality Improvement Organization (QIO). The QIO is an outside reviewer hired by Medicare to look at your case to decide whether you are ready to leave the hospital.
 - If you want to appeal, you must contact the QIO no later than your planned discharge date and before you leave the hospital.
 - If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you do not appeal, but decide to stay in the hospital past your planned discharge date, you may have to pay for any services you receive after that date.
- Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call Utilization Management Department at (323) 857-2108.

Please sign and date here to show you received this notice and understand your rights.

Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	7.3	4.8 - 5.9 %	H ^	956

Comment:

HBA1C CANNOT BE USED TO DIAGNOSE OR SCREEN FOR DIABETES OR OTHER DISORDERS OF GLUCOSE TOLERANCE. HBA1C IS BEST USED TO MONITOR BLOOD SUGAR CONTROL IN PATIENTS WITH DIABETES. IDEAL VALUES ARE BELOW 7.0 % AND VALUES >8.0 % SUGGEST THE NEED TO IMPROVE THE BLOOD SUGAR CONTROL TREATMENT PLAN.

Signed by Schneider, Merrick Tobin (M.D.), MEDICAL DOCTOR on 10/14/09 at 1023		

CHEST - FILMLESS - 10/13/09 - 1555 HOURS

The heart projects minimally larger than on 08/05/09 with elongation of the aorta. The pulmonary vasculature is within normal limits. There are some strand densities in the lower lungs without associated effusion.

On the lateral view there is a subcentimeter density projected over a thoracic body at the level of the lower heart. This could be due to effects of overlapping structures but other etiologies must be considered. If aprior lateral view is available, it would be useful for comparison (Our KLIS record indicates no prior lateral chest imaging at our facility.) A short-term follow-up study can also offer additional information.

Report put on RIS System upon submission of examination for review on 10/14/09.

Diagnostic imaging	35546281	1/6/2010 5:35 PM	Cho, Albert W. (M.D.)
Signed by Cho, Albert W. (M.D.), MEDICAL DOCTOR on 01/07/10 at 0847			

CHEST PA AND LATERAL: 1/5/10

Comparison 10/13/09

FINDINGS:

The cardiac silhouette is normal in size. The pulmonary vessels are normal. The lungs are clear. No infiltrate or effusion is visualized. The nodular density previously seen on the lateral view appears to be due to pulmonary vasculature. No discrete nodule is visualized.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.6	4.8 - 5.9 %	—	956

Comment:

Hb A1c is best used to monitor blood sugar control in patients with diabetes. Ideal values are below 7.0% and values >8.0% suggest the need to improve the blood sugar control treatment plan.

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	1.0	0.7 - 1.3 mg/dL	—	956
GLOMERULAR FILTRATION RATE	>89-B	mL/min	—	956

Comment:

Comments: Estimated GFR is derived and reported per 1.73 m2 body surface area. Race used from Foundations System: "NB" non-black, "B" black. GFR estimate has been multiplied by 1.21 if "B" is indicated in the system. * GFR Ranges * GFR >89 Normal (or CKD1*) 60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD 1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on two occasions, or renal biopsy or imaging abnormality). IDMS-calibrated. See LabNet for Details.

Type	ID	Date and Time	Dictating Provider
Diagnostic imaging	40429506	12/23/2010 6:48 AM	Almanza, Monica Yolanda (M.D.)

Signed by Almanza, Monica Yolanda (M.D.), MEDICAL DOCTOR on 12/27/10 at 0827

RIGHT ANKLE - 3 VIEWS - 12/20/10

Note: This study is submitted for signature to this dictator on Dec 27, 2010.

There are no prior films for comparison.

IMPRESSION:

There is marked deformity of the hind foot also including the ankle mortise with a pattern worrisome for Charcot joint formation. There appears to be an old healed fracture of the calcaneus. No definite acute bony pathology is currently seen but comparison previously submitted would be of value.

RIGHT FOOT - 3 VIEWS - 12/20/10

IMPRESSION:

Charcot joint deformity with evidence of previous calcaneal fracture has been previously described.

There are degenerative changes of the first metatarsophalangeal joint and the first interphalangeal joint. No acute bony pathology but there is apparent deformity of digits 2 through 4 on this non-weight bearing view.

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.9	0.7 - 1.3 mg/dL	—	305
GLOMERULAR FILTRATION RATE	>89-B	mL/min	—	305

Comment:

Comments: Estimated GFR is derived and reported per 1.73 m2 body surface area. Race used from Foundations System: "NB" non-black, "B" black. GFR estimate has been multiplied by 1.21 if "B" is indicated in the system. * GFR Ranges * GFR >89 Normal (or CKD1*) 60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD 1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on two occasions, or renal biopsy or imaging abnormality).

Order status: Completed Filed on: 05/24/12 2016
 Collected by: DDR 05/24/12 0700 Resulting lab: SHERMAN WAY REGIONAL LABORATORY
 Narrative:
 FASTING? NO

Note: This is a result for your order which has been determined to be a duplicate order. Please understand that other providers have also received this result, thus coordination of care is necessary. Click on the Order Details hyperlink for indication of all providers who have received notification of this result.

Components

Component	Value	Reference Range	Flag	Lab
CHOLESTEROL	171	<200 mg/dL	—	956

05/16/2012 - Released Future/Standing Orders in POPULATION CARE MANAGEMENT (continued)

Labs (continued)

HDL	39	>=40 mg/dL	L v	956
LDL	119	<100 mg/dL	—	956

Comment:

----- Non-Fasting (Fasting <12 hrs) ----- The direct LDL-c may not equal the calculated LDL-c that would be obtained when the patient is fasting 12 hours. Elevated triglycerides are an independent risk factor for CVD and provide important medication management information. The fasting lipid panel is recommended. Reference ranges below are expressed in mg/dL CHOL TRIG HDL-C LDL-C -----
 ----- OPTIMAL: <200 <150 >=40 <100 NEAR OPTIML: 100-129 BORDERLN HI: 200-239
 150-199 130-159 HIGH: >=240 200-499 160-189 VERY HIGH: >=500 >=190 -----
 ----- All members with cardiovascular disease, diabetes mellitus, or chronic kidney disease may benefit from LDL-C levels below 100 mg/dL. Optimal management includes adequate dosing of "statin"/lipid-lowering medications.

TRIGLYCERIDE, NONFASTING	174	mg/dL	—	956
--------------------------	-----	-------	---	-----

Comment:

Nonfasting triglycerides (TG) are affected by both recent meals and patient metabolism. No reference range is established. However, nonfasting triglycerides >170 mg/dL are significantly elevated, and measurement of fasting triglycerides may be warranted. Note that if nonfasting TG are sufficiently high, then direct LDL (if TG>1300 mg/dL) or HDL (if TG>2000 mg/dL) measurements may not be valid.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.7	4.8 - 5.9 %	—	956

Comment:

Hb A1c is best used to monitor blood sugar control in patients with diabetes. Ideal values are below 7.0% and values >8.0% suggest the need to improve the blood sugar control treatment plan.

5/25/1955

Type of Visit: Medication Follow up

S: Patient reported that he feels stable with his mood; he had been doing well; he was out for a short time because he is trying to clear his Medi-Cal coverage; he still has MediCare; he had split the dose of Abilify from 20 to 10 mg because of the cost; he said he feels fine although his friend said that he seemed to be talking too much and has a lot of jokes; patient otherwise reported that he has good sleep and appetite; he doesn't have any increased energy than usual; he denied any risk taking behavior; denied any S/HL; no psychosis; denied having any problem from the Abilify.

Mental Status Exam:

Patient is a 56 y/o AAM who presented with normal and appropriate attire; cooperative, no speech abnormalities, mood - he said he feels fine, affect congruent, thought process revealed itself to be linear and goal directed, thought content showed no AH, VH, SI, HI, or delusional content, denied any paranoia; no gross cognitive abnormalities noted, insight good and judgment was unimpaired.

Wt 221.6 lbs

DIAGNOSIS

Axis I: 295.70B SCHIZOAFFECTIVE DISORDER (primary encounter diagnosis)

Axis II: Deferred

Axis III: Patient Active Problem List:

- SCHIZOAFFECTIVE DISORDER (295.70B)
- GERD (530.81A)
- NOT CURRENT SMOKER (V15.82C)
- DM 2 W DIABETIC HYPERLIPIDEMIA, MIXED (500537)
- ELEVATED TRANSAMINASE MEASUREMENT (790.4B)
- SCREENING FOR CA, COLON (V76.51A)
- CHOLELITHIASIS (574.20A)
- OBESITY (278.00E)
- DM 2, UNCONTROLLED (250.02B)
- DEFORMITY OF ANKLE OR FOOT, ACQUIRED (736.70A)

Becoming More Active

Almost any activity that gets you moving and strengthens your muscles is good for your health and can help move you towards your weight goal. Forty-five minutes of brisk exercise burns 250 to 350 calories. If you haven't been exercising regularly, start slowly and gradually increase how long, how often, and how hard you exercise.

- * Aim for at least 30 to 60 minutes of activity on most days. The activity should be hard enough that you feel the effort but not so hard that you become out of breath. Walking is a good choice for many people.
- * Exercising for several short periods that add up to 30 minutes helps just as much as exercising for 30 minutes at a time. You don't have to do it all at once.
- * "Choose to move" whenever you can. Take the stairs rather than the elevator; take a walk instead of a coffee break. These are easy ways to be more active.
- * Make it fun! Vary your activities or team up with a friend to help keep you going. Pick an activity you enjoy.

You may have other ideas of your own about how to be more active. Almost any activity counts!

Your Kaiser Permanente Care Instructions

Seborrheic Keratosis: After Your Visit**Your Care Instructions**

Seborrheic keratoses are raised skin growths that look scaly or warty. They usually look like they were stuck onto the skin. They most often grow in groups on the back or chest and are more common in older people. A seborrheic keratosis can be tan or dark brown. A seborrheic keratosis is not a mole and never turns into cancer. But it is still a good idea to check your skin regularly.

Sometimes a seborrheic keratosis can itch. Scratching it can cause it to bleed and sometimes even scar.

A seborrheic keratosis is removed only if it bothers you. The doctor will freeze it or scrape it off with a tool. The doctor can also use a laser to remove a seborrheic keratosis. Treatment usually results in normal-looking skin, but it can leave a light or dark mark or even a scar on the skin.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- If clothing irritates your seborrheic keratosis, cover it with a bandage to prevent rubbing and bleeding.
- If you have a seborrheic keratosis removed, clean the area with soap and water two times a day unless your doctor gives you different instructions. Don't use hydrogen peroxide or alcohol, which can slow healing.
 - You may cover the wound with a thin layer of antibiotic ointment, such as bacitracin, and a nonstick bandage.
 - Apply more ointment and replace the bandage as needed.
- Check all the skin on your body once a month for skin growths or other changes, such as color and feel of the skin.
 - Stand in front of a full-length mirror. Look carefully at the front and back of your body. Then look at your right and left sides with your arms raised.
 - Bend your elbows and look carefully at your forearms, the back of your upper arms, and your palms.
 - Look at your feet, the soles of your feet, and the spaces between your toes.
 - Use a hand mirror to look at the back of your legs, the back of your neck, and your back, rear end (buttocks), and genital area. Part the hair on your head to look at your scalp.
- If you see a change in a skin growth, contact your doctor. Look for:
 - A mole that bleeds.

07/06/2012 - Office Visit in DERMATOLOGY VENICE A 4TH FLOOR (continued)**Patient Instructions (continued)**

- A fast-growing mole.
- A scaly or crusted growth on the skin.
- A sore that will not heal.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have an area of normal skin that suddenly changes in shape, size, or how it looks.
- Your skin is badly broken from scratching.
- You have signs of infection such as:
 - Pain, warmth, or swelling in your skin.
 - Red streaks near a wound in your skin.
 - Pus coming from a wound in your skin.
 - A fever not due to the flu or other illness.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

Your Kaiser Permanente Care Instructions

Warts: After Your Visit**Your Care Instructions**

A wart is a harmless skin growth caused by a virus. The virus makes the top layer of skin grow quickly, causing a wart. Warts usually go away on their own in months or years. There are several types of warts. Common warts appear most often on the hands, but they may be anywhere on the body. Plantar warts occur on the soles of the feet and may cause pain when you walk.

Warts spread easily. You can reinfect yourself by touching the wart and then touching another part of your body. You can infect others by sharing towels, razors, or other personal items.

Most warts do not need treatment and go away on their own. But if warts cause pain or spread, your doctor may recommend that you use an over-the-counter treatment. These include salicylic acid or duct tape. Or your doctor may prescribe a stronger medicine to put on warts or may inject them with medicine. The doctor also can remove warts through surgery or by freezing them.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

For common warts

- Use salicylic acid or duct tape as your doctor directs. You put the medicine or the tape on a wart for several days and then file down the dead skin on the wart. You use the salicylic acid treatment for 2 to 3 months or the tape for 1 to 2 months.

07/06/2012 - Office Visit in DERMATOLOGY VENICE A 4TH FLOOR (continued)**Patient Instructions (continued)**

- If your doctor prescribes medicine to put on warts, use it exactly as directed. Call your doctor if you think you are having a problem with your medicine.

For plantar (foot) warts

- Wear comfortable shoes and socks. Avoid high heels and shoes that put a lot of pressure on your foot.
- Pad the wart with doughnut-shaped felt or a moleskin patch. You can buy these at a drugstore. Put the pad around the plantar wart so that it relieves pressure on the wart. You also can place pads or cushions in your shoes to make walking more comfortable.
- Take an over-the-counter pain medicine, such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve). Read and follow all instructions on the label.
- Do not take two or more pain medicines at the same time unless the doctor told you to. Many pain medicines have acetaminophen, which is Tylenol. Too much acetaminophen (Tylenol) can be harmful.

To avoid spreading warts

- Keep warts covered with a bandage or athletic tape.
- Do not bite your nails or cuticles. This may spread warts from one finger to another.

When should you call for help?**Call your doctor now** or seek immediate medical care if:

- You have signs of infection, such as:
 - Increased pain, swelling, warmth, or redness.
 - Red streaks leading from a wart.
 - Pus draining from a wart.
 - A fever.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You have a new growth and you are not sure it is a wart.
- You still have warts after 2 to 3 months of over-the-counter treatment.
- Your warts are growing or spreading quickly, even with treatment.
- You cannot walk without pain because of a plantar wart.
- You do not get better as expected.

DERMATOSIS PAPULOSA NIGRA [709.8 (ICD-9-CM)]

Patient Instructions**GETTING OLDER SPOTS**

No one likes to get older, but the alternative is worse!

Seborrheic keratoses

This barnacle on the ship of life is usually a rough, brown or tan warty growth on the skin. As to why people get it, there is no good reply. Medical science, in all its wisdom, doesn't know. They are very common, and their not dangerous, just a nuisance. They aren't caused by the sun, but genetics does seem to be important for some. You may know a relative who has a lot of these.

Dermatosis papillomatosis nigra(dpn).

These are the brown to black tiny flesh moles on the face of many people.

11/12/2012 - Office Visit in DERMATOLOGY VENICE A 4TH FLOOR (continued)**Patient Instructions (continued)**

They tend to be hereditary and are of no consequence. In fact they are a smaller version of the seborrheic keratosis described above.

Capillary hemangiomas

A capillary hemangioma is a blood blister very common on the trunk of adults. Most people over 30 have one or more. They are little dome shaped or slightly raised red bumps. Sometimes, they appear as pinpoint red dots. In one study of adults 30-39 years of age, 90% of the men and 65% of the women had at least one cherry angioma. There seems to be no good reason to have these, but luckily, they are not dangerous.

Skin tags

These tags are common in the axilla, on the neck, in the groin and under the woman's breasts. They catch on necklaces, rub on collars and bras etc. Patients often want to know why they form. There is some correlation with weight and height, but in general why adults get them is another mystery of life.

Bruises on the arms

Many older people bruise very easily on the arms after the slightest trauma or even after no trauma at all. The bruise tends to fade over a month or two. Steroid use can thin the skin and make this worse. Sun exposure also adds to the thinning.

Milia

These tiny, white bumps on the face, usually of women are benign, tiny cysts.

Dermatofibromas

Many people will complain of this bump. It may be pink, red, tan, or brown. The key distinguishing feature is that you can grab it between two fingers and feel it within the skin. Often, when you do this, the surface will be sucked in. These are collections of scar tissue within the skin. Arms, legs, the upper back, especially over the scapula are typical areas. The surface of the dermatofibroma is often pigmented, and at times, velvety.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	6.1	<7.0 %	—	956
ESTIMATED AVERAGE GLUCOSE	129	mg/dL	—	956

Comment:
 Actual blood glucose measurements may differ from the estimated average glucose due to differences in test timing, stability of glycemc control, and RBC lifespan.

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.90	<=1.30 mg/dL	—	305
GLOMERULAR FILTRATION RATE	>89	mL/min	—	305
Comment:				
Estimated GFR (eGFR) is normalized to a standard body surface area (1.73m ²), by sex, age, and race. The eGFR has been multiplied by 1.21 if "Black" race is reported in Foundations System. -GFR Ranges- GFR >89 Normal (or CKD1*) 60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on 2 occasions, or renal biopsy or imaging abnormality).				
RACE	Black	—	—	305

Sensitive Note		

History:

7/5/2013

Lawson B Hawkins

000017508205

5/25/1955

Type of Visit: Medication Follow up

S: Patient said he had an "epiphany" when he thought about life after watching a play; he also said that there was something peculiar with his client's computer that he had to report to FBI; that someone was trying to embezzle his client; he said his mood has not changed; still with paranoia but can carry on with his daily activities; same sleep pattern; has his ideas that he writes; he feels that his ads in Craig's List is being cancelled by someone everyday; he takes ABilify at 5 mg because he said he cannot afford the high co-pay at 10 mg dose; he feels stable and fine; no worsening of symptoms; wants to continue with his regimen; saw his PCP and had good labs.

Mental Status Exam:

Patient is a 56 y/o AAM who presented with casual attire, pants torn in the left knee; cooperative, no speech abnormalities, mood - he said he feels fine, affect congruent, thought process revealed itself to be linear and goal directed, thought content showed no AH, VH, SI, HI, or delusional content, denied any paranoia; no gross cognitive abnormalities noted, insight good and judgment was unimpaired.

DIAGNOSIS

Axis I: 295.70B SCHIZOAFFECTIVE DISORDER (primary encounter diagnosis)

Axis II: Deferred

Axis III: Patient Active Problem List:

- SCHIZOAFFECTIVE DISORDER (295.70B)
- GERD (530.81A)
- NOT CURRENT SMOKER (V15.82C)
- DM 2 W DIABETIC HYPERLIPIDEMIA, MIXED (500537)
- ELEVATED TRANSAMINASE MEASUREMENT (790.4B)
- SCREENING FOR CA, COLON (V76.51A)
- CHOLELITHIASIS (574.20A)

07/05/2013 - OFFICE VISIT - MH/BH in PSYCHIATRY (continued)

Clinical Notes (continued)

OBESITY (278.00E)
DM 2, UNCONTROLLED (250.02B)
DEFORMITY OF ANKLE OR FOOT, ACQUIRED (736.70A)

Axis IV: problems with primary support group

Axis V: Current GAF Score: 63

Treatment Plan:

1. Abilify 10 mg po QHS for mood stabilization
NOTE: patient seemed to be stable at 5 mg dose
2. Follow up with other MDs for all medical concerns
3. RTC in 3-6 months for medication follow up

Tel # 323 298 3125

Time spent: 25 mins

Greater than 50% of the time spent with the patient in counseling and/or coordination of care.

Author Type: PODIATRIST (D.P.M.)
 Creation Time: 7/24/2013 4:29 PM

SUBJECTIVE: Lawson B Hawkins is a 58 year old male follow up for right painful right great toe. Pt had a prior ingrown nail procedure 2 years prior. He has had intermittent pain in the right great toe. He is worried that the ingrown nail has reoccured. Pt also has chronic "cracking" of the skin under the 3rd left digit. This occurs periodically and is painful.

OBJECTIVE:

Filed Vitals:

07/24/13 1603

Resp: 18
 Height: 1.702 m (5' 7")
 Weight: 103.874 kg (229 lb)

HGBA1C 6.1 05/17/2013

GEN: Well developed male in no acute distress, alert, oriented x 3.

VASC: DP and PT pulses intact (-) edema (-)erythema

DERM: TTT (+) hyperkeratotic tissue plantar 3rd left digit,

(+) hyperkeratotic tissue medial border right great toe nail , no evidence of recurrent ingrown nail

MUSCULO: not contributory

NEURO: sharp/dull intact

GAIT:propulsive

ASSESSMENT:

DM 2 controlled
 callus

PLAN:

-wedge resection occurred without incident right great toe nail
 -sharp debridement of the lesion took place with 15 blade
 -pt advised to use emmollient on both areas
 -shoe gear recommendations given
 -all questions answered to the patient's satisfaction

Editor: Lee, Arnold Wu Che (M.D.) (Physician)

Author Type: Physician
Creation Time: 12/3/2013 10:32 AM

History:

"itch almost all gone"

58 year old man with scrotal pruritus now almost completely resolved by protopic. Pleased. The wart on right finger has gotten smaller after cryotherapy and cantharidin.

PMH: reviewed
Meds: reviewed
Allergy: reviewed
12/3/13

ROS: skin rash, all other systems negative

PE: well developed, well nourished, not in acute distress
Inguinal folds examined
Planar papule on finger (smaller than last visit's)
Scrotum no rash

A/P:

1. Wart
-After obtaining patient's verbal consent, cryotherapy with liquid nitrogen applied followed by cantharidin with wooden tip applicator, 2 cycles each, 3/5 sec each, no complications, patient well. Patient advised on possible expected side-effects including alopecia when treating hair bearing areas, blistering, erythema, crusting, pain, scarring, pigmentary alterations, and a 3-4 weeks healing period. Total # treated: 1, may require multiple treatments

2. Scrotal pruritus
-protopic prn

History:

01/02/2014 - Office Visit in FAMILY PRACTICE PERDIEM (continued)

Clinical Notes (continued)

1/2/2014

Seen today by Ericka Gair, DO, Per Diem.

Lawson B Hawkins is a 58 year old male Patient presents with:

LUNG PROBLEM

HPI:

Patient states he drinks 1/3 glass wine every night.

He is here due to feeling an irritation in his upper lungs for the last 1 1/2 weeks when breathing in the fumes of his wine.

No other symptoms.

Smoking Status: Former Smoker Packs/Day: 0.50 Years: 20
Types: Cigarettes
Quit date: 07/21/2008
Smokeless Status: Never Used

Outpatient Prescriptions Marked as Taking for the 1/2/14 encounter (Office Visit) with Gair, Ericka Marie (D.O.):

Aspirin (ADULT LOW DOSE ASPIRIN) 81 mg Oral Tab

ARIPiprazole (ABILIFY) 10 mg Oral Tab

Simvastatin (ZOCOR) 40 mg Oral Tab

No Facility-Administered Medications for the 1/2/14 encounter (Office Visit) with Gair, Ericka Marie (D.O.).

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Review of SystemsConstitutional: Positive for **weight loss (5 pounds in 2 weeks, intentionally)**. Negative for fever, chills, malaise/fatigue and diaphoresis.

HENT: Negative for congestion.

Cardiovascular: Negative for chest pain, palpitations, orthopnea, claudication, leg swelling and PND.

Respiratory: Negative for cough, hemoptysis, sputum production, shortness of breath and wheezing.

Gastrointestinal: Negative for heartburn, nausea, vomiting, abdominal pain, diarrhea, constipation and blood in stool.

Genitourinary: Negative for dysuria, urgency, frequency, hematuria and flank pain.

Neurological: Negative for dizziness, tingling, tremors, sensory change, speech change, focal weakness, seizures, loss of consciousness and weakness.

Physical Exam

Constitutional: He is oriented to person, place, and time and well-developed, well-nourished, and in no distress. He appears to not be writhing in pain, not malnourished and not dehydrated. He appears healthy.

01/02/2014 - Office Visit in FAMILY PRACTICE PERDIEM (continued)**Clinical Notes (continued)**

Non-toxic appearance. He does not have a sickly appearance. No distress.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. He has no wheezes. He has no rales.

Abdominal: Soft. He exhibits no distension. There is no tenderness.

Musculoskeletal: Normal range of motion. He exhibits no edema.

Neurological: He is alert and oriented to person, place, and time. No cranial nerve deficit. He exhibits normal muscle tone. Coordination normal. GCS score is 15.

Skin: He is not diaphoretic.

Psychiatric: Mood and judgment normal. He **has a flat affect**.

Nursing note and vitals reviewed.

Assessment and Plan

530.81 GERD (GASTROESOPHAGEAL REFLUX DISEASE) (primary encounter diagnosis)

Possible symptom due to mild GERD or dyspepsia.

Recommend lifestyle modification, symptom monitoring if not controlled then may start an antacid or anti histamine & report trial to PCP in 2-6 weeks.

Supportive care and precautions reviewed.

Patient aware to return with symptom diary for further work up, if symptoms persist or worsen.

Ericka Gair, DO

Family Medicine Specialist

Per Diem, Adult After-Hours & Daytime Acute Care

Kaiser West-Los Angeles areas

Orders Placed This Encounter

- Aspirin (ADULT LOW DOSE ASPIRIN) 81 mg Oral Tab
- ARIPiprazole (ABILIFY) 10 mg Oral Tab

Electronically signed by Gair, Ericka Marie (D.O.) at 1/2/2014 12:19 PM

Patient Instructions

What is GERD?

Your uncomfortable symptoms ("heartburn", sore throat, cough, hoarseness, throat clearing, and sensation in the back of the throat) may be caused by a condition known as "gastroesophageal reflux disease" or "GERD". This painful condition has nothing to do with the heart, but rather is caused by stomach acid. When you eat, your stomach makes acid to help digest your food. If this acid flows backward - from your stomach into your esophagus, irritation can occur. This can cause burning pain under the breastbone, belching, and unpleasant or "acid" taste in the mouth.

The bad news is that GERD doesn't usually go away on its own. It is usually a continuing condition, which requires continuing treatment.

01/02/2014 - Office Visit in FAMILY PRACTICE PERDIEM (continued)**Patient Instructions (continued)**

The good news is that you can make some simple but important changes in your daily habits (lifestyle) that can help to control GERD. The lifestyle change presented in this brochure is the first and most important part of treating GERD. Even if other therapy is needed, these recommended lifestyle changes would help you to get the most benefit from treatment. Many people with mild or moderate GERD may be able to avoid additional therapy (such as drug therapy or surgery) by following the recommendations listed below.

What can you do?

Here are some simple but important changes in your daily habits that can go a long way toward preventing the painful symptoms of GERD. Although this may seem to be a long list, please keep in mind that lifestyle changes can make a real difference in how you feel, and may even help you avoid the need for more complicated therapy.

You may wish to get the advice of your regular medical doctor before you make any major changes in your diet or before starting a very active exercise program.

Reflux Regimen

1. Eat small frequent meals 4 - 6 times a day. Finish you last meal 3 hours before retiring. No late night meals.
2. Avoid foods that you know cause your symptoms of reflux or stomach upset.
3. Avoid smoking, caffeine, alcohol, spicy, acidic, or fatty foods, chocolate and peppermint.
4. Avoid carbonated beverages or beer, which may increase belching and reflux.
5. Keep your back and head elevated with a wedge or a blanket, so gravity will help drain the esophagus while sleeping (Lazy-boy position). You may also use 6-inch blocks to prop up the head of the bed. Simply raising your head with a pillow does not work.
6. Try to lose weight. Fatty tissue in the abdomen compresses the stomach. Ideal weight is best, but losing 5 pounds may make a difference.
7. Avoid tight fitting clothing.
8. Treat your symptoms with antacids and Gaviscon:

Antacids: (refrigerate to improve taste (Mylanta II or Maalox TC: Take 1 tablespoon 1 hour after each meal and at bedtime.

Gaviscon: (refrigerate to improve taste) Take 1-2 tablespoons before going to bed.

History:

1/21/2014

Lawson B Hawkins

000017508205

5/25/1955

Type of Visit: Medication Follow up

S: Patient said he had a car accident on Dec 18, 2013, he was hit by a car which was backing up; he said this was the 5th accident in 1.5 yrs; this stretched his patience; he also admitted that he had been off from his medication towards the end of last year due to financial problem; he cannot afford the co-pay; he said that his BS was also fluctuating; had urination problem; had poor appetite and would only eat peanuts; he said he also had to change his diet and caused wt loss; he reported that he had thought of killing himself by gas; he tried to let the gas go but for some reason, no gas came out; he then closed the gas eventually; he burned few of his fingers when he was extinguishing the pilot light; told the other MD about the incident; then he was advised to come sooner for evaluation; he had been back to his medication about 2 weeks ago; he denied any SI/HI; he felt he was "irrational" at that time; had been off meds and now he said he is feeling much better when he is on medication again.

Mental Status Exam:

Patient is a 58 y/o AAM who presented with casual attire; cooperative, he read highlighted events from his index card leading to his current state; no speech abnormalities, mood - he said he feels fine now, affect congruent, thought process revealed itself to be linear and goal directed, thought content showed no AH, VH, SI, HI, or delusional content, denied any paranoia; no gross cognitive abnormalities noted, insight good and judgment was unimpaired.

Individual Return Progress Note

Date: 1/23/2014

Procedure Code/Time spent: 90806: 45-50 minutes

Procedure description: Individual Psychotherapy/IOP group screening assessment

Lawson B Hawkins, 58 year old, male

SUBJECTIVE: Major Themes/Symptoms: Pt reports that he attempted suicide on Jan. 3 but feels much better. He heard voices prior to his attempt but he is confused by them at this point. He has not been able to afford the medication so he has not picked it up at this time. This therapist provided him with medical financial assistance program information to pick up one free prescription and apply for assistance in the future. He also reports Being in 5 car accidents in the last 2 years. He has poor appetite and sleep and early morning awakenings. He has little to no support. He wears 2 watches so he can see the time in Italy where his mother and sister currently live. Some ideas are arrogant and grandiose. He is keeping a diary so he can write an autobiography. He is self employed fixing PC's. He says that he enjoys being alone. He currently denies suicidal thoughts.

Interventions: Cognitive/Behavioral counseling, Reality Therapy and Supportive Counseling

OBJECTIVE: Observations of patient's interpersonal and or interverbal exchanges: cooperative; anxious

ASSESSMENT:

Patient's compliance with treatment plan: unclear

Short Term Goals:

Decrease anxiety and depression by changing negative core beliefs to improve self esteem

Improve self care/ exercise 3x/week

Maintain medication compliance/ start taking medications

Progress or lack of progress and level of functioning in regard to goals: No change

Rating Scale for Progress: -1=Regressed/0=No Change/1=Maintains Progress/2=Slight Improvement/3=Improving/4=Met/Exceeds Goals

01/23/2014 - ALLIED HEALTH/NURSE VISIT - MH/BH in PSYCHIATRY (continued)**Clinical Notes (continued)**

Overall impairment/complexity/Severity of symptoms: moderate

Patient Safety: no danger to self and others

Diagnosis: (295.70) SCHIZOAFFECTIVE DISORDER (primary encounter diagnosis) (ONLY AXIS I AND/or II REQUIRED)

PLAN: Plan for future treatment and intensity of needed services: IOP Referral- Pt will attend IOP 1/27/14. Other Pt is scheduled for PHP 2/11/14.

Assessment:

1. Myopia, Astigmatism, Presbyopia
2. Cataracts, OU - not visually significant
3. History of DM Type 2 - no diabetic retinopathy OU (undilated fundus)

Plan:

1. Released copy of updated glasses prescription. Discussed findings with patient. Adaptation to SRx expected. Advised patient on 100% UV protection outdoors. Return to clinic in 1 year for annual comprehensive eye exam or sooner if any changes to vision occur.
2. Monitor yearly, no surgical intervention needed at this time. Discussed with patient importance of UV protection and effects of cataract progression which include overall blur and an increased sensitivity to lights and glare.
3. Discussed findings with patient. Stressed BS, BP and lipids control. Continue screening for diabetic retinopathy - next FP tentative for 06/2015. Emphasized with patient importance of preventing systemic and

Procedure Orders

1. COLONOSCOPY [526782022] ordered by Kim, David Dongyoung (M.D.) at 07/23/14 1604

Pre-procedure Diagnoses

1. SCREENING COLONOSCOPY [V76.51]

Post-procedure Diagnoses

1. COLON POLYP [211.3]

Procedures

1. DIAGNOSTIC COLONOSCOPY PROXIMAL TO SPLENIC FLEXURE [45378 (CPT®)]

Procedure: Colonoscopy

Endoscopist: DAVID D. KIM MD

7/23/2014

Indication: FH of colon polyp

Description of Procedure: Prior to the procedure, I discussed with the patient regarding the risks, benefits, alternatives and complications of the procedure including the risk of bleeding, perforation and adverse cardiopulmonary reaction. Patient signed the consent after all the questions were answered and was placed in the left lateral decubitus position. After adequate sedation was achieved, An olympus video colonoscope was easily inserted into the rectum through the anus and advanced all the way to the cecum. The cecum was identified by the appendiceal orifice and the ileocecal valve. The scope was then slowly withdrawn as the mucosa was carefully examined. Careful withdrawal technique was used to examine every surface of the colonic mucosa. The overall quality of the preparation was good. The total scope withdrawal time was 11 minutes.

Est. Blood loss <1 cc

Specimen removed? yes

of spec. bottles 1

07/23/2014 - Procedure Only in GASTROENTEROLOGY 2FGAS (continued)**Clinical Notes (continued)**

Sedation given:
propofol per anesthesia

Findings/Diagnosis:

1. 4 mm transverse colon polyp, An excisional biopsy was performed.
2. 4 mm sigmoid colon polyp, An excisional biopsy was performed.
3. Small internal hemorrhoids
4. Otherwise, normal colonoscopy to the cecum

Plan:

1. Check the biopsy result, will inform the pt of the result
2. High fiber diet
3. Patient was advised to have a repeat colonoscopy in 5 years.

MICROSCOPIC

DESCRIPTION A microscopic examination was performed. CLINICAL HISTORY CLINICAL HISTORY (REQUIRED): colon polyp
 GROSS DESCRIPTION A. The specimen consists of multiple fragments of tan tissue aggregating to 0.7 cm. Filtered. AE/1B. The specimen consists of a fragment of tan tissue measuring 0.3 cm. Filtered. AE/1 If immunohistochemistry and/or in situ hybridization tests were used in this case, these tests were developed and their performance characteristics were determined by the SCPMG Regional Reference Laboratory. Unless otherwise indicated, these tests have not been approved by the US-FDA, although such approval is not required for analyte specific reagents of this type. This testing was performed at: SCPMG Regional Reference Laboratories 11668 Sherman Way, N. Hollywood, CA 91605 Gary A. Gochman, M.D., Laboratory Director
 SPECIMEN(S) RECEIVED A: COLON POLYP, BIOPSY - descending B: COLON POLYP, BIOPSY - sigmoid

Patient Instructions**POST COLONOSCOPY INSTRUCTIONS**

Your physician has completed an examination of your lower intestinal tract using a flexible fiber-optic instrument. Sedation has been used during this procedure. Biopsies and/or polyps may have been removed from the bowel. The following precautions apply:

1. After your release from the GI Department, you must have a friend or family member present to drive you home. For hospitalized patients an escort from our transportation services will take you back to your room on a gurney.
2. Rest at home during the remainder of the day. DO NOT attempt to drive a car or operate any potentially dangerous machinery for a minimum of twelve (12) hours.
3. Someone should stay with you for at least six (6) hours after you return home or longer if residual sedation persists.
4. Air has been used to assist in visualizing the bowel. Some distention and gas passage is normal, as well as cramping. This may occur for up to six (6) hours after the procedure.
5. If you experience severe abdominal pain or swelling, vomiting or rectal bleeding consisting of one (1) tablespoon or more, contact your physician immediately at 332-857-4138. If the clinic is closed, please go to

07/23/2014 - Procedure Only in GASTROENTEROLOGY 2FGAS (continued)**Patient Instructions (continued)**

the Emergency Department. For hospitalized patients, please notify the nurse immediately.

6. Follow your physician advice regarding resumption of diet.

7. If you have had a polyp removed, follow a low-residue diet and do not engage in strenuous exercise or strenuous work, requiring lifting, for 48-72 hours. No aspirin, Motrin, Advil, Ibuprofen or other NSAIDS for two weeks after polyp removal.

FOLLOW UP CARE

If intravenous (IV) site is painful, place warm compresses on the site until soreness disappears.

If your physician requests a return call, please call 800-954-8000 and leave a message.

CONSENT FOR COLONOSCOPY
PLEASE READ CAREFULLY

00 0017508205 05 55

PATIENT'S NAME: LAWSON B HAWKINS H

MEDICAL RECORD NUMBER:

072314

IMPRINT KAISER PERMANENTE IDENTIFICATION CARD HERE

You have been referred for a colonoscopy which is one of the most valuable and informative examinations that can be made concerning the condition of your colon. As with all medical procedures however, it may be associated with some risks.

Colonoscopy is performed using a special instrument called a colonoscope. It is inserted into the rectum and advanced throughout the entire length of the lower intestine, also known as the "colon." This examination allows us to directly visualize all or part of the colon and allows us to obtain samples of tissue. Abnormal growths called "polyps" may be removed.

Patients often worry about the discomfort and complications that may occur from this procedure. Colonoscopy may be associated with some discomfort, but sedative medication will be given to minimize your discomfort during the examination.

In rare cases, there may be serious complications of colonoscopy.

Whenever an instrument is passed into your body, there may be a risk of puncturing the intestine or injury to the spleen. If this should occur, the treatment would depend on the location and extent of the injury. Some injuries may require a hospitalization with several days of observation; others may require immediate operation and longer hospitalization.

If biopsies are performed, or polyps are removed, bleeding may occur from the site. Usually, bleeding is managed in a non-surgical manner, but in rare cases, it may require surgery.

The sedative medications that are given to you may cause an allergic or other undesirable reaction such as aspiration pneumonia.

Although colonoscopy is widely accepted as one of the best tests for colon cancer screening, it is not a guarantee against future development of colon cancer. In addition, significant polyps, or rarely, a small cancer may not be detected during the procedure due to various reasons such as but not limited to the inherent nature of the instrument, limitation of medical technology, the anatomy of your colon, coexisting medical conditions, and cleanliness of the bowel preparation.

Finally, although complications occurring with colonoscopy are quite low, very rarely the more serious complications have resulted in death.

If you are allergic to any medications or have any allergies, please indicate these in the following blank space; if not write NONE.

Medication Allergies: NKDA

The colonoscopy and alternative diagnostic procedures have been explained to me. I give my consent to have colonoscopy, with possible biopsy, with possible polypectomy, with _____ performed.

INITIAL EVAL PLAN OF CARE

Clinical Notes (continued)

REHABILITATION PLAN OF CARE 11/3/2014

Referring Provider: Hooks, Sarah Elizabeth (M.D.)

Referring Diagnosis:736.70 (ICD-9-CM) - ACQUIRED DEFORMITY OF RIGHT ANKLE (Reason: Charcot joint deformity R foot/ankle, diabetes; pt feels change in balance with slight unsteadiness, needs balance eval/treat)

Treating Impairment/Dysfunction: Decreased balance secondary calf weakness, decreased DF ROM, decreased ability to maintain balance on single leg.

Long-Term Goals:

- (1) I with HEP in 1 week
- (1) Ambulate and perform chores and errands with no LOB during the day in 10 weeks
- (2) Improved SLS to 30 seconds bilaterally with minimal wobble to improve balance and decrease falls risk in 10 weeks
- (3) Improved Calf raises to full ROM And 25/25 repetitions to improve balance and decrease falls risk in 10 weeks

Rehab Potential: good

Type and Amount (procedures; modalities): There ex, there act, neuro re-ed, manual therapy, e-stim, traction, US

Frequency: 1 times every 2 weeks for

Duration: 10 weeks

Recertification due: 1/12/15

Re-evaluation to be completed at end of plan of care, unless indicated sooner otherwise.

=====

Time in: 9:10 AM
 Time out:9:45 AM
 TTT:15 min
 TTC: 35 min
 Eval: 20 min

Patient verbalized understanding that a PT student/intern would be performing treatment today. Patient is in agreement. See below for statement of supervision.

SUBJECTIVE

Lawson Hawkins is a 59 y.o. male who reports he prefers to be called "Berg", he presents with unsteadiness and LOB. Pt. Reports no falls. He reports that he is diabetic and that he has some loss of sensation in his feet, but that his diabetes are well controlled. He reports he has had diabetes for 6 years and has some loss of sensation in his feet. Patient reports he thinks his issue has to do with "proprioception" and his "nerves." Pt. Reports balance has gotten worse in past 2-3 months

Aggravating factors: He reports that his balance issues don't seem to be consistently related to any particular activities. He reports losing balance when going through his daily activities such as cooking.

Clinical Notes (continued)

Activities: He reports he does activities around the house but has not been going out as much secondary to "psychiatric issues"

Med History

SCHIZOAFFECTIVE DISORDER
DM 2 W DIABETIC HYPERLIPIDEMIA
MIXED COLON POLYP CHOLELITHIASIS
ACQUIRED DEFORMITY OF RIGHT ANKLE
OBESITY, BMI 30-34.9,

RED FLAG QUESTIONS

Any sense of weakness/loss of energy interfering with function at home/work/school/socially for the last 2-4 weeks or longer? (if yes note if any medication is taken or if patient is in first trimester of pregnancy): no
Any feeling of coming down with an illness for the last 2-4 weeks or longer? no
Any weakness (particularly from pelvis, shoulder) interfering with function home/work/school/socially for the last 2-4 weeks or longer? no
Any falls? (if yes ask reason why?) no
Any chills/sweats/fever for more than 2 weeks? no
Any unexplained weight loss/gain higher than 5-10% of your body weight in the last 4-6 weeks? no
Any nausea? (if yes ask if they have increased nausea medication) no
Any numbness on extremities or saddle region? no
Any difficulty starting urination? no
Any dizziness/lightheaded or lost of consciousness? no
Are you a smoker (if yes how many years)? na
Any history of cancer? no

Language preference: English
Learning preferences: v,d,w
Learning Barriers: none
Educational needs: Patient Edu, HEP

OBJECTIVE

Palpation/Observation: with feet NWB demonstrates inversion biased deformity and standing he has collapsed arches and everted calcani. Pt. Reports he tends to put his weight on his heels when standing.
Gait: Decreased heel and ankle rocker with decreased heel contact, decreased gait velocity, decreased dynamic dorsiflexion, increased pronation.

Neuro exam

Sensation: Decreased but not absent sensation on B heels
DTRs: Patellar 2+ B, Achilles 1+ B

MMT:

Hip flexors: 5/5 B
Quads: 5/5 B
Dorsiflexors: 5/5 B
Plantarflexors: 3-/5 B

Clinical Notes (continued)

Hip Extensors: 5/5 B
Hip abductors: 4/5 B

Function Tests:

SLS (with table in front for balance): 4 sec L, 3 sec R, excessive wobble B with LOBX1 on R with min A to regain balance.

Knee to wall for DF - 1 inch B

Treatment:

DL and SL standing dorsiflexion Plantar flexion// Pt. advised to start with DL at home and progress to SL. Good return demo.

SLS // Good return demo

Standing calf stretch against wall // good return demo. Pt. Reports he can feel stretch

Patient education

Patient advised to keep hands touching surface with heel rises and SLS to maintain balance

Patient educated about how his plantarflexor weakness, decreased dorsiflexion ROM, and difficulty with single limb balance are related to his balance concerns. Pt. Reports he understands how these issues play into his difficulties with balance.

Patient advised to put more weight on toes when standing throughout the day to load calves and evenly distribute weight on his foot.

ASSESSMENT

Patient decreased balance secondary calf weakness, decreased DF ROM, decreased ability to maintain balance on single leg.

Rehab potential = good.

PLAN

Patient to attend PT once every 2 weeks for 10 weeks for treatment to include strengthening, balance training, and stretching

Patient agrees to plan-of-care.

Patient re-evaluation date is approximately 1/12/15. Re-evaluation will occur early if a significant change in status occurs.

Patient notified if they are not seen for PT within 60 days, unless otherwise prescribed, or do not keep 2 appointments they will be discharged from PT at that time. The patient will have to acquire a new Rx to return to PT from that point. Patient acknowledges understanding of policy.

Long-Term Goals:

(1) I with HEP in 1 week

(1) Ambulate and perform chores and errands with no LOB during the day in 10 weeks

(2) Improved SLS to 30 seconds bilaterally with minimal wobble to improve balance and decrease falls risk in 10 weeks

(3) Improved Calf raises to full ROM And 25/25 repetitions to improve balance and decrease falls risk in 10 weeks

Rehab Potential: good

Clinical Notes (continued)

=====
Plan: (See Plan of Care above.)

Informed consent: I have discussed the relative risks, benefits, and alternatives for treatment of this problem with the patient: Yes and patient verbalized understanding and agreement with the treatment plan.

Today's treatment (list type AND minutes for each): 10 min therapeutic exercise, 5 min patient education

History:

11/3/2014

Lawson B Hawkins

000017508205

5/25/1955

Type of Visit: Medication Follow up

S: Patient was last seen in Jan 2014; he said he is "still alive"; no untoward incident since last visit; denied having any safety issue but finds himself emotional; increasingly depressed when he heard about a friend who was sick from Chicago; cries even with the music; elderly mom is sick in Italy; he has been off from the Abilify "many months"; he said he was in the donut hole; not interested with MFA; he said he doesn't feel psychotic but quite stable; not really low nor high periods; he is also watching on his diet because of his diabetes; he has "doubtful" experience with the therapy; "I am very reluctant to talk with the therapist"; he had previous experience with a friend who was a therapist himself; he said that friend died because he was smoking in bed and had severe burns; since then he doesn't want to talk with the therapist anymore; he is aware that he has paranoia but for now he prefers not to have any therapy at all; he still works to fix PC's; denied mania, denied any SI/HI; denied A/VH; he wants to get back to his Abilify; he is still in the donut hole but he borrowed money to pay for his medication.

Mental Status Exam:

Patient is a 59 y/o AAM who presented with casual attire; cooperative, he appeared thinner in body weight as compared before; has 2 watches , one in each arm; he said the other one is his mother's time; no speech

Clinical Notes (continued)

abnormalities, mood - he said he feels fine now, affect - bright, thought process revealed itself to be linear and goal directed, thought content - denied any SI/II; Perception - denied any A/VH, denied delusion, ?paranoia; no gross cognitive abnormalities noted, insight/J/IC - limited

DIAGNOSIS

Axis I: 295.70B SCHIZOAFFECTIVE DISORDER (primary encounter diagnosis)

Axis II: Deferred

Axis III: Patient Active Problem List:

SCHIZOAFFECTIVE DISORDER (295.70B)

GERD (530.81A)

NOT CURRENT SMOKER (V15.82C)

DM 2 W DIABETIC HYPERLIPIDEMIA, MIXED (500537)

ELEVATED TRANSAMINASE MEASUREMENT (790.4B)

SCREENING FOR CA, COLON (V76.51A)

CHOLELITHIASIS (574.20A)

OBESITY (278.00E)

DM 2, UNCONTROLLED (250.02B)

DEFORMITY OF ANKLE OR FOOT, ACQUIRED (736.70A)

Axis IV: problems with primary support group

Axis V: Current GAF Score: 63

Treatment Plan:

Discussed about medication compliance

Also BHL if in crisis or ER or 911

Not interested in therapy; not interested in MFA

MEDICATION

1. Abilify 20 mg tab - take 0.5 tab po QHS for 1 week then start 0.5 to 1 tab po QHS for mood stabilization

Pls continue to follow up with PCP regarding medical condition

Return for follow up on Jan 7 at 8:30 AM or sooner if needed

Tel # 323 298 3125

Time spent: 15-20 mins

Greater than 50% of the time spent with the patient in counseling and/or coordination of care.
